

ESET NOD32 Antivirus 4

we protect your digital worlds™

How Does Yours Compare?

**You buy your antivirus software to protect your computers/data but how effective is it?
Do you turn it off because it slows you down?**

Virus Bulletin is an independent testing organization with full time professional antivirus experts. It is widely recognized within the antivirus industry for their rigorous comparative tests focusing on virus detection rates, scanning speed, and generation of false positives. To earn a Virus Bulletin Award (VB100), an antivirus product must detect all of the current "In-the-Wild" viruses without producing any false positives.

ESET NOD32 is the only solution worldwide that has never missed a single "In the Wild" worm or virus in this testing since May 1998 and holds the world record of VB100 Awards, obtaining the **55th Award in April 2009**.

The table below is based on the number of times all of these products have been tested periodically on various operating systems with Virus Bulletin since May 1998 which is when ESET NOD32 was first submitted to them for testing.
